

Spira Scorpius Men's Running Shoes

Whether you wake up early to run before work, run around during your busy day, or work out at the gym Spira Scorpius Men's Running Shoes are for you. With cushioned EVA insoles and midsoles your feet will never feel like they're hitting pavement. The EVA insoles and midsoles have three metal springs sandwiched between them that provide the forefoot, arches, and heels with support and energy. Your feet will be tired on their next run because they ran so far, not because you're wearing unsupportive shoes. People who suffer with over pronation and flat feet will feel happy that they will have such good arch support and wide heel stability. While running you will notice that your toes won't get cramped and painful, the forefoot spring works with your toes, preventing unneeded pressure that can cause bunions and metatarsalgia. This EVA insole can be removed so you can put in orthotic inserts and arch support inserts that may correct foot placement and alignment. Spira Scorpius Men's Running Shoes are shoes that are great for all types of activities and have a rubber sole that will keep your spirit confident and ready for any journey.

Spira Stinger XLT Women's Running Shoes

Energize your feet while you run with Spira Stinger XLT Women's Running Shoes. Go where you've never been before with pressure point reducing stainless steel springs that absorb shock affecting the feet, ankles, legs, hips, and back. With springs in the forefoot and heel you'll have less pressure put on these areas, relieving heel pain, plantar fasciitis, and bunions. Spira Stinger XLT Women's Running Shoes come with a lightweight and airy synthetic mesh upper that keep heat away as well as bends and flexes with the movement of your foot. While running there is high impact on the heels, this running shoe comes with a heel strike made of tough rubber. EVA insoles and midsoles cushion the foot and arches, assisting in keeping the curve of the feet stabilized but flexible. These insoles can be taken out, leaving room for arch support

inserts and even orthotic inserts that are good for maximum foot alignment. With a textured rubber sole your foot will grip any surface with confidence. Exercise is meant to destress you, keep the stress away with Spira Stinger XLT Women's Running Shoes.
